

Homework

1. Create void function that copies one string to another.
2. Create stack library based on linked list:
 - int Push(int); // add element
 - int Pop(*int); // read element and remove from stack
 - int Read(*int); // read element without removing it from stack
3. Create queue library based on array:
 - int Put(int); // add element
 - int Get(*int); // read element and remove from queue
 - Int Read(*int); // read element without removing it from stack
4. Create function, that receives pointer to other function as a parameter.
