Homework

- 1. Create void function that copies one string to another.
- 2. Create stack library based on linked list:

```
- int Push(int); // add element
```

- int Pop(*int); // read element and remove from stack
- int Read(*int); // read element without removing it from stack
- 3. Create queue library based on array:

```
- int Put(int); // add element
```

- int Get(*int); // read element and remove from queue
- Int Read(*int); // read element without removing it from stack
- 4. Create function, that receives pointer to other function as a parameter.
