GlobalLogic®

Homework

1. Create void function that copies one string to another.

2. Create stack library based on linked list:
    - int Push(int);   // add element
    - int Pop(*int);   // read element and remove from stack
    - int Read(*int); // read element without removing it from stack

3. Create queue library based on array:
    - int Put(int);   // add element
    - int Get(*int);   // read element and remove from queue
    - Int Read(*int);   // read element without removing it from stack

4. Create function, that receives pointer to other function as a parameter.
